Re: Part-time lab work for wages / experience

I'm seeking to hire a part-time wage-payroll lab assistant for the remainder of fall and spring semester 2009-2010. Tasks would include a mix of routine lab tasks along with assistance with research on analytical and physical chemistry for crop, soil and environmental sciences. This job could lead to a summer position involving field and/or lab work on development and application of new techniques for characterization of plant or soil components in the context of environmental issues or development of biomass energy.

No experience is necessary, but applicants should have a strong interest and academic background in a scientific or technical field. Any sort of paid or unpaid work experience is a plus. The ideal candidate would also have experience and interest in analytical or physical chemistry, environmental science or plant biochemistry, computing and laboratory instruments.

If this sounds appealing and you have at least one three- to four-hour block of time available in your weekly schedule, please contact me.

Thank you,

Douglas Archibald, Ph.D.
